

Varnish Issues

Varnish is used as the caching system at WPOven , Some quick Commands to see and check for errors

See top uncached url's , This will help see which urls are going through

```
varnishtop -i BereqURL
```

See cache hits , missis and nuked

```
varnishstat -1 | grep cache_  
varnishstat -1 | grep nuke
```

See the misses and hits

```
varnishncsa -F '%t %r %s %b %{Varnish: time_firstbyte}x %{Varnish: handling}x'  
varnishncsa -F '%t %r %s %b %{Varnish: time_firstbyte}x %{Varnish: handling}x' | grep miss
```

Trace 503 error

```
varnishlog -q 'RespStatus == 503' -g request
```
