

Xdebug

Install xdebug for version

```
apt-get install php7.4-xdebug
```

then edit the config file

```
vim /etc/php/7.4/fpm/conf.d/20-xdebug.ini
```

Values to be like

```
zend_extension=xdebug.so  
xdebug.mode=trace  
xdebug.output_dir=/srv/trace
```

Then in the code put in

```
xdebug_start_trace();
```

make it up locked , then run the code and monitor the trace (vim no wrap helps - :set nowrap)
